

## Automate the Training of Regressors

### What is Automated Machine Learning?

Intelligently test **multiple** algorithms and hyper-parameters in parallel and return the best one

- Deploy into production
- Further customize or refine

#### QUIZ QUESTION

Automated Machine Learning gives users the option to automatically scale and normalize input features. It also gives users the ability to enable additional featurization, such as missing values imputation, encoding, and transforms.

What is the default behavior in Automated Machine Learning to deal with missing values for categorical features?

- ☐ Impute with average value
- ☒ Impute with most frequent value
- ☐ Custom substitution value
- ☐ Remove entire row
